3D Printing – What is it and how will it affect the Built Environment & manufacturing

About the event:

Event details:

**Date:** Tuesday 18th November 2014  
**Time:** 6.30pm Tea & Coffee served, Lecture at 7.00pm  
**Venue:** Rochestown Park Hotel, Cork  

For further details on this event, check out our community calendar in the members area of the website or visit the Cork Region [website](#)
Paul Lee, an experienced architect, product designer and educator will talk about the onset of 3D printing technologies and the areas of industry that are being affected now and where they are going in the future.

3D printing is a game-changer. The question regarding adoption is not about “if” it will happen, but “how fast” Paul will outline how 3D printing is already being used in the following industries:

Medical- Body parts replacements and procedures
Aeronautical/ Automotive
Architectural & Engineering visualisation
Component manufacturing

And the in the future- How 3D Printing will be used to print building structures and all components.
