

Energy & Environment Division Evening Lecture

Corrib Gas Development: Technical, Safety and Regulatory Challenges

Presented by:

Gerry Costello, BE, M.Eng.Sc
Senior Project Management Adviser, Shell E&P Ireland Limited

Lecture Commencing at 18:30 Wednesday October 5th

Venue: Engineers Ireland, 22 Clyde Rd, Dublin 4

The Corrib gas field was discovered in 1996 and the final investment decision was taken by the Corrib partners in late 2001. The concept adopted was a subsea offshore development tied back to an onshore gas terminal. This concept still represents best practice for developing a gas field in deep waters close to an existing gas market. The Corrib project has faced many challenges technical, safety and regulatory and the lecture will provide an insight into how the challenges have been addressed and the way forward.

Speaker Profile

Gerry Costello joined Shell International in 1969 after graduating with a Mechanical Engineering degree from UCD. He has since then worked in engineering roles in oil and gas facilities, pipelines and subsea developments. Prior to returning to Ireland in 2002 he was the project manager for major offshore and onshore gas field developments for Shell in Malaysia and Oman. He has been involved in the project management of the Corrib development since 2002.

The lecture will also be made available live by WebEx on the Engineers Ireland website www.engineersireland.ie . For password details please contact Jim Gannon, Chairman, Energy and Environment Division: jim.gannon@rpsgroup.com.

Presented in association with The Energy Institute
