In 1969 the Waverley Route from Edinburgh to Carlisle closed as part of a major restructuring of the railways in the UK at the time. Almost 50 years later it is due to reopen later this year. In partnership with Network Rail, BAM have undertaken the reconstruction of this railway, which is the longest domestic railway to be constructed in the UK in over 100 years.

The presentation aims to explain the development of the project, how Bam Contractors got involved. This presentation will give an insight into the design and construction challenges associated with the rebuilding of 50km of Victorian railway. Finally, we will briefly outline the construction of the rail track and associated S&T (signalling and telecoms).

Date: Tuesday 17th February 2015 @ 19.00pm
(tec and coffee 18:30).
Venue: Rochestown Park Hotel, Cork

Contact: Adrian Cunningham (021) 4517300; acunningham@bamcontractors.ie
