IE43 Biotech Facility

Synopsis: In 2012 Eli Lilly announced the construction of a new €330m plant at their site outside Kinsale in Cork. The development, currently in late stage commissioning phase, consists of a 244,000 sq ft manufacturing facility on 3 floors including clean-room process areas and ancillary functions including Utilities, Offices, Labs and Warehouse.

This project has involved the use of a multi-continent design workshare program, procurement of equipment from worldwide vendors including China and all site elements of the project managed by the Lilly Project Team including Automation design.

The lecture will be of particular interest to those in pharmaceuticals and biotechnology, and to anyone responsible for the design or delivery of a complex multidiscipline capital project.

Speaker: Ultan McKibben is Lilly Project Manager responsible for the Design, Construction Commissioning & Qualification of the IE43 Biotech Manufacturing Facility Project. As a member of Lilly’s Global Facilities Delivery team he has had a lead role in many recent projects which have transformed the Dunderrow site to become Lilly’s main centre for the manufacture and supply of active ingredients for its new biopharmaceutical medicines.

Date/ Time: Tuesday, 3rd November at 19:00; Tea & Coffee from 18:30

Venue: Rochestown Park Hotel

Booking: Not required. This is a public lecture open to all.
